

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	02 August 2026
Team ID	
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

This session focuses on designing an automated, self-service Metro Ticket Generating System in ServiceNow. The goal is to eliminate physical ticketing queues by enabling digital ticket booking, automated record creation in custom tables (u_metro_ticket_booking), and instant QR code generation for gate entry. Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team Members & Roles:

- System Administrator / Developer (ServiceNow)
- Process Owner / Business Analyst

Problem Statement:

Commuters face long waiting lines at metro station booking counters to purchase physical tokens or paper tickets. Existing manual ticketing creates bottlenecks during peak hours, lacks automated tracking, and provides limited real-time visibility into daily travel volume.

Project Objective:

Build a self-service **Metro Ticket Generating System in ServiceNow** using Catalog Items, Flow Designer, and dynamic HTML/QR generation to allow users to instantly book metro passes and receive digital QR codes for entry gates.

Step-2: Brainstorm, Idea Listing and Grouping

Category 1: User Experience & Self-Service (Catalog Item)

- Allow users to select Source and Destination stations from dynamic dropdowns (Reference tables).
- Enable multi-ticket quantity selection with automatic total price calculation.
- Provide dynamic preview of ticket details prior to ordering.

Category 2: Automated Processing & Ticket Generation (Flow Designer)

- Automate approval and ticket record creation in custom tables (u_metro_ticket_booking).
- Auto-generate unique Ticket Reference IDs upon request submission.

- Dynamically generate a scannable Ticket QR Code using an embedded HTML/API renderer.

Category 3: Data Management & Reporting

- Maintain a central table for station details (u_metro_station).
- Log passenger names, travel dates, station pairs, and booking statuses.

Step-3: Idea Prioritization

Priority	Feature / Idea	Complexity	Impact	Inclusion in Scope
Must Have (P1)	Catalog item for station selection & ticket ordering	Low	High	Included (Phase 1)
Must Have (P1)	Auto-record creation on table u_metro_ticket_booking via Flow	Medium	High	Included (Phase 1)
Must Have (P1)	Inline HTML scannable QR Code generation	Low	High	Included (Phase 1)
Should Have (P2)	Email notification containing the QR code & ticket details	Medium	Medium	Future Enhancements
Could Have (P3)	Gate scanner API integration for live ticket validation	High	High	Out of Scope
