

Project Design Phase-II

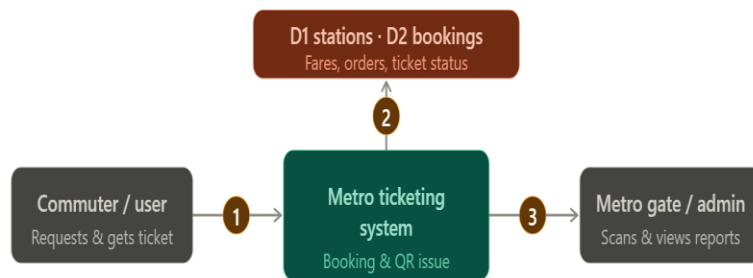

Data Flow Diagram & User Stories

Date	02 August 2026
Team ID	
Project Name	Metro Ticket Booking In Servicenow
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example:

1. Commuter submits source, destination & ticket count
2. System validates, books & logs to station/booking data
3. QR ticket is issued and later scanned at the gate

1. Data Flow Diagram (DFD) Summary

- **External Entities:**
 - **Commuter / User:** Submits station choices and ticket requests; receives digital QR tickets.
 - **Metro Gate / System Admin:** Scans and verifies tickets; views booking reports.
- **Processes:**
 - **1.0 Catalog Submission Process:** Validates inputs (Source, Destination, Ticket Count).
 - **2.0 Flow Designer Automation:** Generates record ID, maps fields, and updates approval status.
 - **3.0 HTML QR Generator:** Creates visual QR code payload for gate scanning.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Commuter	Ticket Selection	USN-1	As a commuter, I want to select my Source and Destination stations from dropdowns so that I can specify my travel route.	System populates valid station names from u_metro_station without raw IDs.	High	Sprint-1
Commuter	Dynamic QR Generation	USN-2	As a commuter, I want to view an instant QR code on my request form so that I can scan it at the gate.	HTML container renders a scannable QR code image upon selection.	High	Sprint-1
Commuter	Multi-Ticket Order	USN-3	As a commuter, I want to specify the number of tickets so that I can book for multiple passengers at once.	Input field accepts positive integers and logs total quantity on ticket record.	Medium	Sprint-1
Admin	Automated Record Creation	USN-4	As an administrator, I want submitted orders to automatically create records in u_metro_ticket_booking via Flow Designer.	Flow triggers on catalog submission and maps all user choices correctly.	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Admin	Ticket Status Tracking	USN-5	As an administrator, I want to see real-time booking statuses so that active and used passes can be monitored.	Ticket record status defaults to 'Active' upon generation.	Medium	Sprint-2
