

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	02 August 2026
Team ID	
Project Name	Metro Ticket Booking In Servicenow
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

1. Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Station Selection & Booking	Selection of Source Station from Metro Station table Selection of Destination Station from Metro Station table Input quantity for number of tickets
FR-2	Dynamic QR Generation	Inline rendering of QR code image on form UI Generation of unique booking payload for gate scanning
FR-3	Order Processing & Workflow	Automatic creation of ticket booking record in target table (u_metro_ticket_booking) via Flow Designer Auto-assignment of ticket reference ID and Active status
FR-4	Record Management & Audit	Display human-readable station names (Display = true) on reference fields Logging passenger name, order timestamp, and ticket status

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple Service Portal interface enabling passengers to request tickets in under 3 clicks with immediate visual feedback (QR code).
NFR-2	Security	Role-based access control (RBAC) ensuring users can only view their own booking details while admins maintain full audit privileges.
NFR-3	Reliability	Consistent automated record creation without data loss or failed field mappings during Service Catalog submission.
NFR-4	Performance	Page loading and QR code rendering within 2 seconds upon catalog form interaction.
NFR-5	Availability	High availability provided via the cloud-hosted ServiceNow instance, ensuring 24/7 access for ticket generation.
NFR-6	Scalability	Capable of handling high volumes of concurrent station lookup requests and ticket orders during peak commute hours.
